DERECK J. BOATWRIGHT

Decatur, GA 30033 | (470) 338-9435 | dereckboatwright@icloud.com

PROFESSIONAL SUMMARY

U.S. Navy Veteran with 13.5 years of active-duty service, including hands-on experience in identity and access management, classified and unclassified network operations, and end-user technical support across secure federal environments. Issued and managed SIPR PKI credentials for nine years, administered user accounts and access controls, operated Windows and Linux systems on NIPRNet and SIPRNet, and maintained system documentation and audit-ready records. DoD 8570/8140 IAT Level II qualified with a B.S. in Cybersecurity Management & Policy.

SECURITY CLEARANCE

Eligible/Able to Obtain Clearance

Previously Held: Secret (2010–2023) | Top Secret/SCI (2015–2023)

EDUCATION & CERTIFICATIONS

Bachelor of Science, Cybersecurity Management & Policy | May 19, 2026

University of Maryland Global Campus

CompTIA Security+ | Expiration Jul 31, 2029

WORK HISTORY

United States Navy | E7 - Chief Petty Officer | Jun 2010 – Nov 2023

Duty Stations: Keesler AFB, MS | Yokosuka Naval Base, Japan | Misawa AB, Japan | Stennis Space Center, MS | Joint Base Pearl Harbor-Hickam, HI

PROFESSIONAL EXPERIENCE

Identity & Access Management

- Issued and managed SIPR PKI tokens for hundreds of personnel across nine years and multiple commands, coordinating identity verification through the Local Registration Authority (LRA) and maintaining full accountability for classified system access credentials.
- Administered user accounts and access across classified and unclassified systems, processing 600+ access requests and verifications and handling adds, removes, and changes in accordance with security policy.
- Controlled access to classified and COMSEC areas, operating badging and access control systems, coordinating escort procedures, and enforcing least-privilege and need-to-know standards.
- Verified system access and account activity in SECDADA, maintaining accurate access records across classified watch floors.

Networking & Systems Administration

- Configured static and dynamic routing, VLANs, trunk ports, IP addressing, subnetting (CIDR), and NAT/PAT in virtual network environments, implementing network connectivity and segmentation.
- Configured DHCP and DNS servers and an SSH server for secure remote access; used Wireshark and command-line diagnostics (traceroute, ipconfig/ifconfig, ping, arp, nslookup, netstat, Nmap, tcpdump) to analyze network traffic and troubleshoot connectivity issues.
- Operated Linux (Red Hat) and Windows systems on NIPRNet and SIPRNet within a 24/7 mission operations center, coordinating in-house and external IT support to restore degraded systems and maintain continuity of operations (COOP).
- Monitored infrastructure performance and service availability of an AWS-hosted public-facing site across NIPR and SIPR, conducting routine health checks and escalating outages to senior technical staff.
- Deployed aboard multiple ships with a classified laptop, working with shipboard IT personnel to integrate the system into each ship's CANES network and establish SIPR connectivity, email, and shared-drive access.
- Supported system upgrades and patching activities in coordination with IT personnel, verifying changes against approved configurations and maintaining operational stability.

Windows Administration & Automation

- Administered Windows systems using Task Scheduler, Event Viewer, Performance Monitor, System Restore, and User Account Control (UAC); automated recurring administrative tasks using PowerShell scripting.
- Administered an in-house trouble ticketing system end to end, logging issues, tracking resolution, and coordinating with technical teams to keep operations online.
- Built automation tools to streamline recurring tasks, including PowerShell utilities for file and folder management, automated request forms in Adobe Acrobat with JavaScript, and Excel/VBA tools for tracking and reporting.
- Operated and trained personnel on 12 software applications, including ArcGIS, with hands-on exposure to Python-based workflows.

Security & Compliance

- Configured host and network security controls including NTFS permissions, shared-folder access, BitLocker encryption, and Windows Defender Firewall; implemented DMZ segmentation and performed basic Linux and macOS command-line administration.
- Served as classified material custodian for SECRET and TOP SECRET/SCI material across multiple commands, maintaining accountability with zero security incidents over 13.5 years.
- Audited and rewrote 80 Standard Operating Procedures and revised 20 internal control policies, closing gaps and driving a 20% increase in efficiency and 80% reduction in errors.
- Maintained audit-ready documentation and control evidence, supporting successful command inspections and self-inspection cycles.
- Monitored operational security posture and computer security awareness, reviewing and updating documentation when changes affected the security of information systems.

Hardware & Technical Support

- Installed and configured memory, storage devices, expansion cards, and BIOS/UEFI settings; diagnosed hardware, firmware, and system configuration issues.
- Provided technical support to end users across a diverse military and civilian workforce and trained hundreds of personnel on computer systems, security procedures, and operational qualifications.

SKILLS

Identity & Access Management | PKI / Certificate Issuance | Account Provisioning & Deprovisioning | Access Control Systems | Windows & Linux (Red Hat) | NIPRNet & SIPRNet | TCP/IP, DNS, DHCP Fundamentals | Routing & Switching (VLANs, Static/Dynamic Routing) | Subnetting (CIDR) | NAT/PAT | SSH | Wireshark | Nmap | System Health & Availability Monitoring | Trouble Ticket / ITSM Workflows | Incident Escalation & COOP | Security Compliance & Audit Documentation | NTFS Permissions | BitLocker Encryption | Windows Defender Firewall | DMZ Segmentation | BIOS/UEFI Configuration | JPAS / DISS | PowerShell | Python (Basic) | JavaScript | Excel/VBA | Microsoft Office Suite | Google Workspace
